

Requirements

- Manage data Source: before you upload any data source you must create new data source like (Google analytics, Facebook pixel, marketing agency), or assign it to existing data source.
- Upload file: in this section you must validate file extensions (XLS, CSV) Each file must belong to specific data source.
- Manage Jobs, each file uploaded and stored in your data base will be as a new job and this must contain these fields (job_id, job_date, data source name, file name, execution time, number of records).
- Criteria page: have some filter criteria (search by: gender, data source, date)
